CROSS SECTION

MATERIAL SPECIFTCATIONS

CONCRETE - UCS Inc, uses a proprietary concrete mix that is rated at a compressive strength of 4,000 psi and contains 6% air entrainment for protection against freeze-thaw cycles.

GRAVEL - Most concrete projects use CA-6 gravel that contains 3/4 inch stone mixed with fine and medium sand. Where drainage is a concern, some municipalities require the strict use of clean 3/4 inch gravel.

WIRE MESH - 6-inch X 6-inch grid of 10-gauge steel wire mesh is suspended near the bottom of the slab to prevent separation of the concrete slab.

REBAR - 1/2 inch rebar is used in patios and driveways pinned to the foundation to prevent sinking of the concrete slab.

FLASHING - 6 mil polyethylene flashing is used to cover and existing organic surfaces that are to make contact with the new concrete.

CONTROL JOINTS - Control joints are used to control cracking due to the expansion and contraction of concrete. For both broom finish concrete and stamped concrete, the control joints are cut with a concrete saw.

Here are the most common steps.

We also offer custom step designs if requested.

Note: Many customers believe they need two steps but 80% of the time that is not the case however optional.
